**DETAILED ACTION**

1. Applicant's amendment and remarks, filed 1/29/09, are acknowledged.

Claims 53-67 have been cancelled.

Claims 68-76 have been added.

Claims 68-76 are pending.

2. Claims 72-74 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention. In the reply filed 2/27/08, Applicant elected a method of stimulating an immune response for the treatment of cancer as the species of method (i.e. a method wherein the administered antigen is a tumor antigen). Claims 72-74 are drawn to a species of method wherein the antigen is a viral, fungal, or bacterial antigen. A method comprising stimulating an immune response to a viral, fungal, or bacterial antigen does not read on the elected method of treating cancer

Claims 68-71 and 75-76 are being acted upon.

3. All of the previous grounds of rejection are withdrawn in view of Applicant's amendment to the claims to limit the glycoconjugates to those comprising the Lewis X antigen.

4. The following are new grounds of rejection necessitated by Applicant's amendment.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 68-71 and 75-76 are rejected under 35 U.S.C. 102 (b) as being anticipated by WO 98/39027, as evidenced by Coombs et al., 2005.

WO 98/39027 teaches a method of stimulating an immune response comprising administering glycoconjugate comprising a Lewis X antigen (see page 4 in particular). WO 98/39027 teaches that the Lewis X antigen can be conjugated to a glycolipid or to a tumor protein antigen (i.e. a protein which is capable of

Art Unit: 1644

being processed and presented as peptides in the context of MHC class I/II, see page 4). WO 98/39027 teaches performing the method for the treatment of patients suffering from cancer (see page 4). Additionally, as evidenced by Coombs et al., Lewis X antigens bind to DC-SIGN receptor (see page 22998, in particular). Thus, the method of WO 98/39027 which involves administering an antigen comprising a Lewis X antigen, would inherently result in the administration of the antigen through a DC-SIGN receptor of the individual.

Thus, the reference clearly anticipates the invention.

6. No claim is allowed.

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
